An absolutely incredible experience. Perfect music composition, artful presentation, and exhilarating gameplay. A classic Ace Combat experience, very very different from Assault Horizon and definitely worth a buy.. I think as a VR experience its not a big deal BUT for Deus Ex fans its pretty cool. You can walk around in certain scenes of the game. the graphic is downgraded to VR level so smooth and still looks good (tried on maximum everything, resolution change turned off set to maximum) but not as good as the game.

I cant wait for implementing VR into the base game or releasing Eidos first VR game.

Good try on VR keep up the good work. :). Complete cheap♥♥♥♥♥rip off of warcraft 3 literally ♥♥♥♥♥ing duplicate of all mechanisms that I like it.

I like it.

Because it is modestly done.

I like the fact that even with all similarity to warcraft and other more famous RTS games,

this game is somehow unique. It has heros, units with heavy/light position but gameplay is completely different

to previous RTS games.

I wonder that why there is no sequel of this game, perhaps because it is such a minor title I suppose?

And game play might feel boring for people who are used to more fast paced games.

But it is still modest title and fun to play.

. awesome simple funny litle game, but it is still early access so it has a lot of bugs. and some functions do not work yet.

but i think it will be awesome if it is finished whoooooo.

like cake thats awesome to.. When I was younger I had an Amiga 1000 instead of an IBM. (They weren't called PC's back when pterodactyls were delivering our E-Mails.) Classic Load Runner was an IBM game not an Amiga game. So I sort of missed out on this classic game. So, for me it's really awesome to see this remake with the "classic" levels. (As far as I am able to discern they are the same layout if not entirely identical to the originals. However, I could be off given I have to search the internet for info on the original.)

Based on this alone I wanted the new Lode Runner and been happy. The game is simple but allows for a wide variety of levels with just the basic components. And you get over a hundred of those levels. But you also get an adventure mode with a bunch of new levels and new enemies.

AND you get a level builder with access to a community levels server that gives, well, LOTS of levels. Probably there will be millions in the not too distant future. A simple rule that you must be able to beat the level in the editors play test mode before publishing it somewhat makes certain that there are no 'unwinnable' levels. Though I found one frustrating one where you have

to die multiple times in the correct order to win the level so it's not perfect. But these seem to be pretty rare.

You also get some funky camera stuff. 3D and first-person views and close up stuff. But that all turns out to be way less cool than it seemed like it would be when I first heard of it. (Sort of like FPV Pac-Man turned out to be. Seemed like it would be cool. Wasn't.)

Sorry. I can find things to nitpick in any game.

So. Short version. There's a lot to like here. Most of it permutations on a very solid simple formula. But it's a good formula and there's a LOT of it here. This game gets the Selva seal of approval and a rare dew claw up. Yes, I recommend this game. You MAY need a little nostalgia to get full value out of it. But given the deluge of modern military shooters and... stopping myself before I get started... Given the 3xA space these days a solid Donkey Kong-esque platformer is refreshing. And this is a good one.
